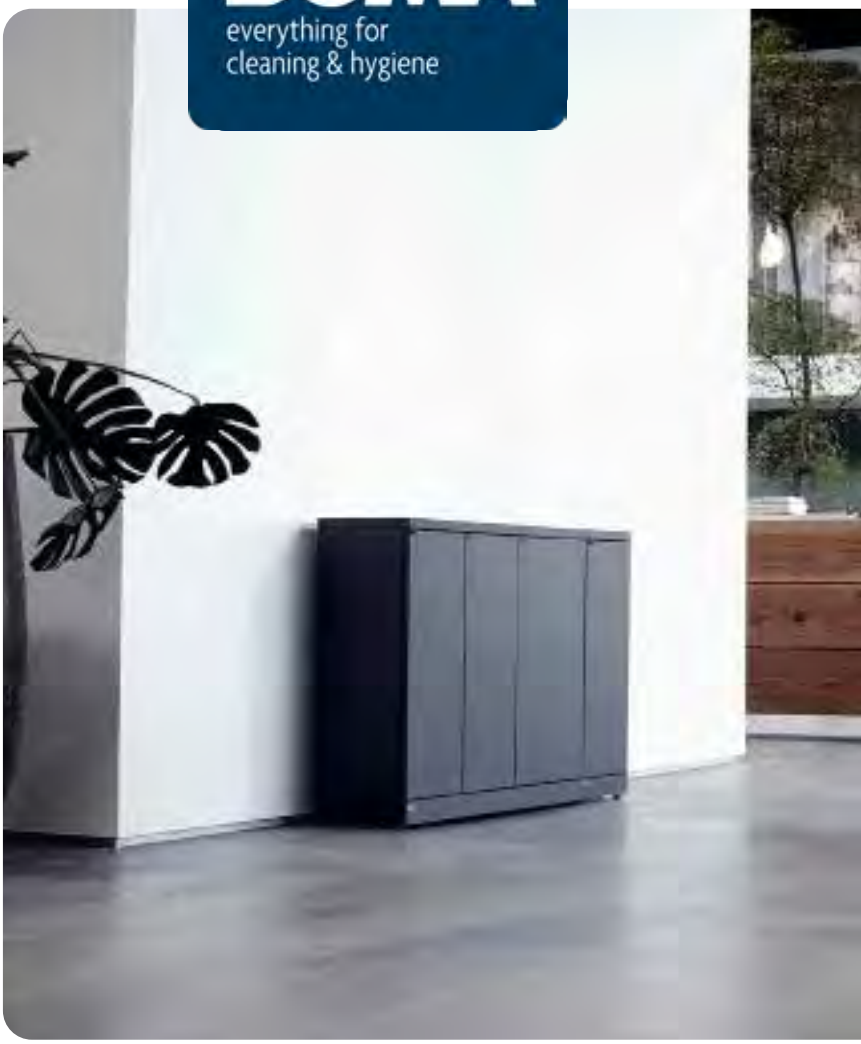
BOMA
everything for
cleaning & hygiene



Give your waste new life with BOMA's waste sorting solutions →

simple. smart. fun.

Why BOMA is the right choice

→ We have everything you need!

→ We offer personal advice.

→ We share our knowledge.

→ We have a convenient online shop with management tools.

→ All our technical and product information sheets are available online.

simple. smart. fun.

Proper sorting starts with the **right bins** and **waste containers**

Good waste management at your business, including proper waste separation, not only contributes to a better environment, but also helps you save costs and teaches people to be waste-conscious. We are happy to help you on your way to sustainable waste management with a high-quality range of bins, waste containers and sorting solutions.

Every bin also needs the right bin liner. BOMA is committed to sustainability and therefore only offers bin bags consisting of at least 80% recycled plastic. This makes our bin bags compliant with the Flemish regulation Vlarema, in force since 2021.

The five cornerstones of a **successful sorting project**

A sorting project within your organisation can make a huge difference when it comes to a more sustainable future. By taking a structured approach to waste separation, your company contributes to a lower carbon footprint and more efficient recycling. To make this process successful, there are five cornerstones that will give your project a solid

1

Commitment

Waste sorting starts with management commitment. It is essential that the leadership teams are fully behind the project. They need to understand why sorting is important and actively show their support. Consider a letter of intent or attending a kick-off meeting.

TIPS

- Designate a project manager.
- Provide the necessary resources, such as budget and staff.
- Make commitment visible through communications in strategic places.

2

Monitoring

Establishing and following a clear schedule is crucial. Start with a thorough analysis of your current situation: '**what waste streams are present?**' and '**amount of waste**' at different locations. Make sure litter bins are well placed and take into account specific target groups, such as non-native speakers or visitors.

After the start-up, it is important to evaluate and adjust regularly. Analyse the quality of the separated streams and discuss this with maintenance staff and your waste partner.

TIPS

- Communicate progress and results achieved.
- Motivate employees by giving positive feedback.
- Provide clear reporting and analyses of waste collectors.

3

Infrastructure

A well-equipped infrastructure makes sorting easier for everyone. Consider strategically placing waste bins with clear labels. Make sure there are enough bins in high-traffic areas, such as the canteen or near vending machines.

TIPS

- Group waste bins into sorting islands for a clear sorting area.
- Use the colour codes that are used in your region.
- Provide adapted waste bins, e.g. with round insertions for PMD or slots for paper.

4

Involvement

The success of your project depends on the involvement of all staff and visitors. Good communication is key here: inform everyone about the new sorting procedures via newsletters, emails and internal meetings.

TIPS

- Start the project with a staff meeting.
- Use posters and standard emails to inform visitors and suppliers.
- Regularly thank and congratulate on sorting efforts to keep motivation high.

5

Logistics

The logistics side of your sorting project is just as important. Make sure maintenance staff is well informed about the proper sorting instructions. Cooperation with your waste partner should be closely monitored to ensure that the collected waste fractions are recycled effectively.

TIPS

- Train your maintenance staff on how to empty bins correctly.
- Regularly discuss the results with your waste partner and adjust the contract where necessary.
- Use the official PMD bags and ensure clear waste separation.

By following these five cornerstones, you lay the foundation for a successful sorting project that benefits both your organisation and the environment. Start today and see how small efforts can make a big difference!

source: Fostplus

Let’s rethink cleaning.

Which waste bin is right for my organisation?

Sustainable waste management starts with choosing high-quality bins. Which waste bin fits best in which situation? And what should you consider? We would like to give you a few points that can help you determine the right bin for your organisation

- Type of bin
- Size of bin
- Operation of bin
- A sorting island pays off from seven employees
- Reduce = sorting at source

Waste bin type

Looking for an indoor or outdoor waste bin? Do you want a single bin or a sorting island?

In this brochure, we categorise the waste bins into four groups:

1.

Bomabin Select

waste bins for selective separation of waste

2.

Bomabin Outdoor

outdoor waste bins

3.

Waste collection trolleys and waste containers

perfect for collecting and transporting your industrial waste

4.

Individual waste bins

waste bins with pedal or swing lid

Size of bin

When choosing the right size of your bin, it is important to decide the room and location of the bin. If you want to create central waste separation stations, it is also important to know the sorting requirements that apply to your organisation.

Tip

Always keep the same order of bins. Decide which fractions to sort and how much waste you have for the size of the bin.

Operation of waste bin

There are different ways to operate or open a waste bin.

Open waste bin: waste bin without lid

- ⊕ Perfect for paper and other office waste.
- ⊖ Not designated for odour-causing waste.

Waste bin with pedal (Bomabin select pedal):

the lid of the waste bin is opened with a foot pedal.

- ⊕ Practical and hygienic.h.
- ⊖ The lid is not removable.

Waste bin with swing lid (Swing fix):

the bin lid is opened by gently pushing against it.

- ⊕ Easy to use and lid is removable
- ⊖ Lid gets dirty faster.

Bomabin Select

Central waste separation

Proper waste separation lets us maximise the recycling and reuse of raw materials. So, waste is valuable and a good sorting policy contributes to conscious environmental conservation. But that's not all! Waste separation stations at central locations also means:

- More movement in the workplace, thereby improving ergonomics.
- You teach your employees to be conscious about waste.
- Time savings for cleaning staff. You only need to collect the waste at central locations.
- Same size of bin liner for each bin.
- A better understanding of your waste flows and quantities.

The better waste is sorted, the easier processing and recycling will be

simple.

Bomabin Select Bica

Elegant and functional modular waste bin made of powder-coated

This comprehensive range of litter bins are ultra modular, ergonomic and finished to perfection. **Explore the full range via the QR code** and discover the cream of the crop among litter bins.

BOMABIN SELECT BICA

Features

- Elegant and stylish design
- Possibility to combine different fractions: open (round, slot), lid, pedal, etc.
- Ergonomic thanks to front soft-closing doors
- Integrated bag holders or inner tray
- Very strong thanks to 1.3 mm steel
- Easy to connect thanks to magnets: perfect for multiple waste flows
- Concealed wheels or adjustable feet
- Fire-resistant and long-lasting
- Available in 45 l, 65 l or 95 l

Bomabin Outdoor

The first step towards clean premises is to install high-quality outdoor waste bins. A good outdoor waste bin is sturdy, resistant to all kinds of weather and strategically placed near the entrance, bicycle parking area, lunch spot or near a bench in the sun. Place your waste bins so that they are easily visible, as a clean site makes a good impression for your business.

Bomabin outdoor

Strong outdoor waste bins

Cibeles and Rhea are UV-resistant outdoor waste bins in polyethylene. Bica is an elegant and functional modular outdoor waste bin made of galvanised and stainless steel.

BOMABIN OUTDOOR CIBELES & RHEA

Features

- UV-resistant
- Ribbed exterior prevents posters and graffiti from sticking
- Easy to empty and clean
- Fitted with triangular lock with key
- Equipped with top-mounted ashtray (Cibeles only)
- Suitable for wall and pole mounting
- Capacity of 50 litres
- Includes two clamps for mounting

BOMABIN OUTDOOR BICA

Features

- Perfect for selective waste separation
- With opening (30 x 12 cm)
- Soft-close doors with magnetic closure and lock in front and with integrated bag holder for ergonomic replacement of bin bag
- Very strong and vandal-resistant with a sleek and elegant design
- Includes ground anchor

Waste collection carts

Sorting waste into waste islands is only part of the story. The other part is to collect the waste and transport it to large waste containers.

If you don't have that much waste or only have a few bins to empty, you can easily take the waste with you on the cleaning cart. If you have a lot of waste and different fractions to collect at once, you can opt for a waste cart. The C-Shuttle waste collection carts are comfortable to use, light and manoeuvrable and easy to drive, even with a load of up to 200 kg. Above all, they are sustainable, containing as much as 90% recycled plastics, and are 100% recyclable. If desired, you can close the waste cart completely, provided you have added doors and panels. You can also make even more fractions with each waste cart thanks to the bag divider included.

WASTE COLLECTION CART

Features

- Mobile bin bag holder with whisper wheels
- With or without lid (model with lid has a pedal, model without lid has no pedal)
- Two wheels are equipped with a convenient brake
- The bin bag holder has self-clamping elastic to keep the bag in place

Proper sorting results in both biogas and compost!

In many European countries, there is a sorting requirement for kitchen waste and food waste. Yet another obligation? Perhaps, but one with a number of advantages:

- We limit that amount of residual waste that must be incinerated
- Kitchen waste, food scraps and food waste do not go to waste, but are used to produce compost and biogas
- We convert the biogas into green energy for households and businesses
- We use the compost for healthier soil

Organic waste collection with the right bin liners

Made from plant-based materials like potato starch, our organic bags are **100% biodegradable** and compostable. Go green and do your bit for the environment!

Did you know...?

... we can produce 20 kg of compost from the average company's weekly food waste Or supply two households with green power for an entire day
